Lab 02: Binary Arithmetic & Introduction to MIPS

Assigned: Thursday, January 16th, 2020 **Due**: Tuesday, January 20th, 2020

Points: 60 (PDF questions), 11 (Programming questions)

- You may collaborate on this homework with AT MOST one person, an optional "homework buddy".
- MAY ONLY BE TURNED ON **GRADESCOPE** as a **PDF** file.
- There is NO MAKEUP for missed assignments.
- We are strict about enforcing the LATE POLICY for all assignments (see syllabus).

Don't use a calculator or online solvers when working these problems. You will not be able to use them in exams either, so it's good practice to know how to do these!

Binary Subtraction

TA71 . .

The following problems ask you to subtract one binary number from another. While this can be done directly, it is typically easier to negate the second number (using the 2's complement method), and then add the two together. **You must express the answer in 8 bits.** There will be several steps, but only show the answer. You will ALSO NEED TO SPECIFIY the overflow (**V**) and carry (**C**) bits.

1.	wnatis	
	11001101	
	- 01100100	
		(answer)
		(answer)
2.	What is	
	01101001	
	- 10110101	
		(answer)
3.	What is	
	10010110	
	- 11111111	
		(answer)

Name:			
(as it w	ould appear on official course ros	ter)	
4.	What is 10110010 - 00000001		
			(answer)
	Bitwise Operations	·C· 1 ·/1 \0 \ 1 ·/	OR WAY AND WAY
	What is 10010011	ined with & , bitwi	se OR with ` `, and bitwise XOR with `^`.
	& 10111011		
		(answer)	
6.	What is 11100001		
	& 10010001		
		(answer)	
7.	What is		
	10011011 11100101		
		(answer)	
8.	What is		
0.	11110101 ^ 00001011		
		(answer)	
	our answers for the follo &`, bitwise OR with ` `, ar		hexadecimal . Recall that bitwise AND is specifie
9.	Calculate 0x05 & 0xF 0		(answer)
10.	. Calculate 0x2A & 0x5 5	<u> </u>	(answer)
11.	. Calculate 0x5D 0xAA	·	(answer)
12.	. Calculate 0xBE 0xEF		(answer)

Name:					
(as it wou	ıld appear oı	n official course roster)			
13. (Calculate	0x79 ^ 0x97		(answer)	
14. (Calculate	0x16 ^ 0x9C		(answer)	
Give you	ır answe	rs for the followin	g set in 8-bit binary.		
15. V	What is	11010001 >> 1	for logical shift right?	(ans	wer)
16. V	What is	11010111 >> 1	for arithmetic shift right?	(ans	wer)
17. V	What is	10010011 >> 2	for logical shift right?	(ans	wer)
18. V	What is	10010011 >> 2	for arithmetic shift right?	(ans	swer)
19. V	What is	10010011 << 2	for shift left?	(ans	swer)
20. V	What is	00000011 << 2	for shift left?	(ans	swer)
The entr	ies show		, , ,	be either '1' or '0'). Your answe	er can

(as it would appear on official course roster)

For the following three questions, remember that bit numbers start numbering from 0. Assume that these hexadecimal numbers are always unsigned. In addition to showing the mask you would use, also show the operation you would use, like so: **& 0x0020**. (i.e., AND the original number with the hexadecimal mask 0x0020.)

23. Specify the mask you would need to inspect **bit 13** of the unknown number. Express it as a 4-digit hexadecimal number (i.e. in the form of 0xhhhh).

24. Specify the mask you would need to set just **bit 13** of the unknown number to zero. That is, the result of this operation results in a new number, which the unknown number should be subsequently set to. Again, express it as a 4-digit hexadecimal number.

25. Specify the mask you would need to set **bit 13** of the unknown number to one. That is, the result of this operation results in a new number, which the unknown number should be subsequently set to. Express it as a 4-digit hexadecimal number.

Name:

(as it would appear on official course roster)

26. (8 pts) Complete the MIPS assembly language program below that is supposed to take the values in \$t0, \$t1, and \$t2 and first calculate the value of (\$t1 + \$t2 - \$t0), then logic AND it to the value of (\$t0 + \$t2). The entire calculated value should be placed in \$t3. Finally, the program should print the value of \$t3 to standard output and exit correctly. You should try it out and test it, like the code(s) I demonstrated in class to be sure it has the correct syntax.

```
li $v0, 10 syscall
```

27. (2pts) What is the value of **\$t4** (in 32-bit <u>hexadecimal</u>) after the above program is executed? Show it with a hand-calculation (i.e. not by running the program only, but by calculating it yourself).

Bitwise Operations in C/C++

See the lab description on our main class website for details on these next tasks. This requires some programming knowledge of C/C++ (which you should know from CS 16, etc...) You will complete these C/C++ programs and then upload them to **Gradescope**, per the instructions on **lab02** on the website.
